

CLAIMS

We claim:

1 1. A device for connecting an electric motor, comprising:
2 two electrical conductors leading to the electric motor; and
3 a suppressor arranged between said two electrical conductors, wherein said
4 suppressor includes a capacitor and a varistor connected in parallel.

1 2. The device of claim 1, wherein said varistor is a disk type varistor.

2 3. The device of claim 1, further comprising a casing made of fuel resistant
3 plastic.

4 4. The device of claim 3, wherein said casing is integrally connected with said
5 suppressor.

6 5. The device of claim 3, further comprising inductors respectively connected to
1 said two electrical conductors, wherein said casing is integrally connected with said suppressor
2 and with said inductors.

3 6. A combination including an electric motor and a device for connecting the
4 electric motor, said device comprising:

5 two electrical conductors leading to the electric motor;
6 a suppressor arranged between said two electrical conductors, wherein said
7 suppressor includes a capacitor and a varistor connected in parallel;

8 a casing made of fuel resistant plastic; and

7 inductors respectively connected to said two electrical conductors, wherein said
8 casing is integrally connected with said suppressor, said inductors and regions of said electric
9 motor which adjoin said inductors.
